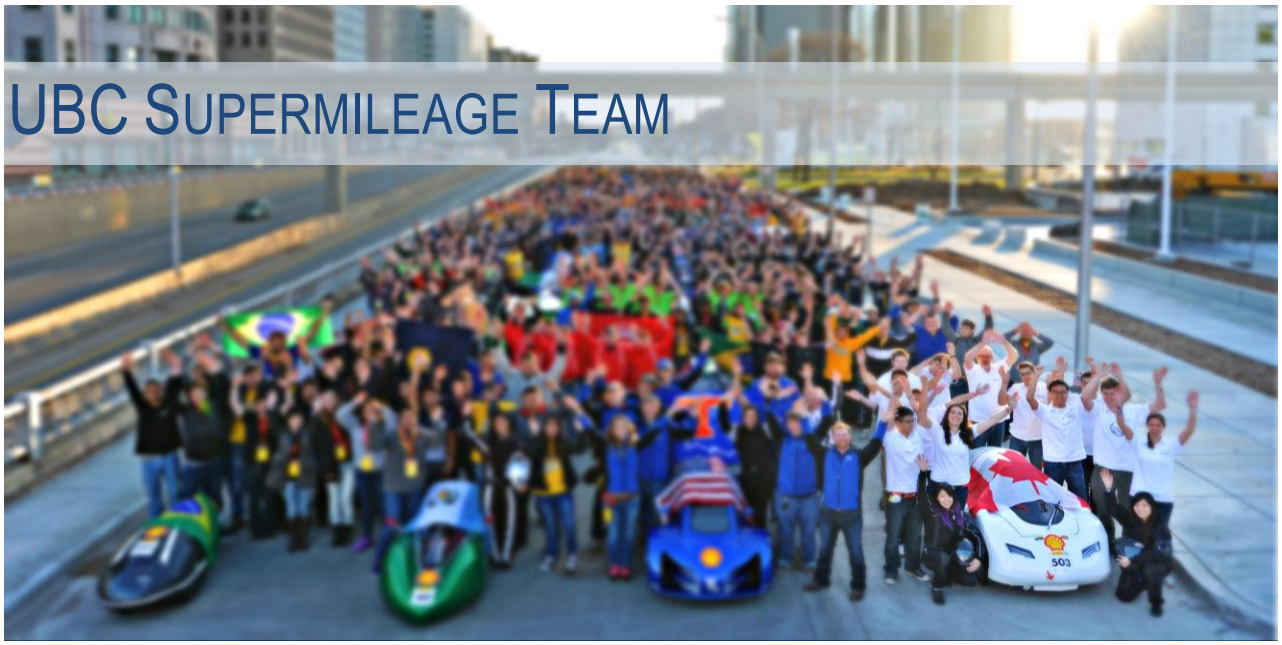
for any questions or additional information

UBC SUPERMILEAGE TEAM



The UBC Supermileage Team is a group of 70 dedicated engineering students working to design and build fuel efficient, gasoline-powered vehicles for the Shell Eco-Marathon Americas and the Society of Automotive Engineers (SAE) Supermileage competitions. Our diverse team includes technical students from mechanical, geological, eng-phys, integrated, electrical, civil, and materials engineering as well as business and science students seeking to make a difference. Within this sponsorship package, you will be able to find the following:

- **A Message from the Captains**
- **Competition Descriptions**
- **Past Achievements**
- **Overview of Vehicle Designs**
- **Our Goals for this Year**
- **How You Can Support Us**

THE PURSUIT OF EFFICIENCY

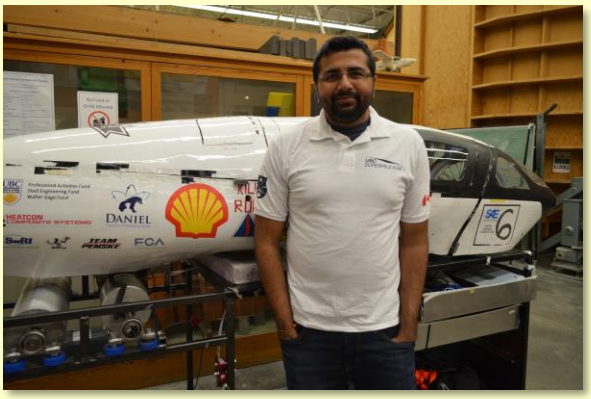
Since 2001, our team has designed and built multiple super-mileage vehicles and has achieved fuel mileages of up to 3145 mpg (1337km/L). We are passionate about effecting positive change on the environment with our engineering education and have actively participated in community and professional events to raise awareness for sustainable transportation. With a proven track record of continuous success, we are looking to grow our industry relations and further improve on our competition performances!

WHY WE NEED YOU!

As a student design team, we rely heavily on the support and funding of local community and industry partners. Your support gives us the opportunity to practice engineering outside the classroom and grow as young professionals. Specifically, your contribution allows us to purchase material and equipment for the design and development of our vehicles.

MESSAGE FROM THE CAPTAIN

Thank you for your interest in the UBC Supermileage Team!



My name is Sahil Dhingra and I am a fourth year Electrical Engineering student with a Commerce minor in my final year at UBC. I joined the team three years ago and since then Supermileage has taught me so much in terms of hands-on experience over the years, but even more so in terms of teamwork and maintaining a positive and safe work environment. Since joining the team, I have been part of the electrical and engine teams, as well I have had numerous opportunities working with members in the chassis and aero division, giving me a well-rounded understanding of the team. Supermileage has been an invaluable part of my education at UBC, and I could not be more honoured to be the leading the team this year.

As Captain this year I want to maintain our reputation as one of the top teams at competition while promoting sustainability and student development for for our budding engineers and business students alike. In conjunction, we plan to extend our reach to the public by attending as many community events as possible and raise sustainbility awareness.

This year we are excited to be competing in the Shell Eco-Marathon in April 2018 as well as the SAE Supermileage competition in June 2018. Our plans for the vehicles include sleeving our engine to increase efficiency, remaking the chassis out of nomex material to reduce weight and optimizing the drive train. For our Urban Concept, we will be fabricating custom hydraulic brake calipers, redesigning printed circuit boards (PCBs) to reduce electrical consumption and refining the wiring on the vehicle. The simultaneous construction and R&D work done on our two competitive vehicles, and attending two competitions is a rewarding process but does lend us a heavy financial strain. We welcome any contributions and are greatly appreciative of our sponsors. Your partnerships support students who want to go above and beyond the classroom learning and create lasting change.

Thank you,

Sahil Dhingra
2017 - 2018 UBC Supermileage Team Captain

THE COMPETITIONS

The UBC Supermileage Team has competed internationally at the Shell Eco-Marathon Americas and the Society of Automotive Engineers Supermileage competition. Both competitions challenge teams to design, construct, and test cutting-edge, energy efficient vehicles.

COMPETITION JOURNEY

Starting in 2001, the team competed in the SAE Supermileage Competition with the "Mark" series of Prototype class vehicles. From 2003 to 2006, the team dominated the podium with first place finishes and then set its sights on the Shell Eco-Marathon Americas (SEMA) Urban Concept challenge. In 2010, the team debuted in the Urban Concept class. In 2013, the team decided to revive the development of prototype vehicles as well as continue development of the team`s Urban Concept vehicle to allow more learning opportunities for team members. Upon competing in both vehicles classes in the SEMA competition, the team finished in 2nd and 5th place. Last year, the team continued to compete in both vehicle classes in the Shell Eco-Marathon. We also entered the Prototype vehicle in a second competition, the SAE Supermileage Competition which UBC had not participated in for 10 years.

	Date	Result	Mileage
URBAN CONCEPT	2017	DNF	-
	2016	DNF	-
	2015	2nd Place	0.726L/100km (324mpg)
	2014	3rd Place	0.722L/100km (326 mpg)
	2013	2nd Place	0.408L/100km (577 mpg)
	2012	3rd Place	0.817L/100km (288 mpg)
	2011	4th Place	1.099L/100km (214 mpg)
PROTOTYPE	2017	6th Place (SAE)	0.447L/100km (566 mpg)
	2017	20th Place (Shell)	0.451L/100km (521 mpg)
	2016	6th Place (SAE)	0.329L/100km (715 mpg)
	2015	DNF(Shell)	-
	2014	DNF (Shell)	-
	2013	5th Place (Shell)	0.170L/100km (1383 mpg)
	2008	4th Place (Shell)	0.126L/100km (1865 mpg)
	2006	1st Place (SAE)	0.075L/100km (3145 mpg)
	2005	1st Place (SAE)	0.147L/100km (1608 mpg)
	2004	1st Place (SAE)	0.135L/100km (1747 mpg)
	2003	1st Place (SAE)	0.254L/100km (927 mpg)
	2002	4th Place (SAE)	0.263L/100km (895 mpg)

SHELL ECO-MARATHON AMERICAS COMPETITION is open to student teams from across North and South America. It comprises both Prototype and Urban Concept class vehicles and multiple energy sources.

SAE INTERNATIONAL™

SAE SUPERMILEAGE COMPETITION is open to student teams from across North America with gasoline powered Prototype class vehicles.

URBAN CONCEPT class vehicles challenge students to create cars that more closely resemble real-life automobiles in appearance and functionality.

PROTOTYPE class vehicles encourage students to create a futuristic vehicle that maximizes fuel mileage with minimal design constraints.

OUR GOALS

PURSUIT OF EFFICIENCY

DESIGN AND BUILD TWO COMPETITIVE VEHICLES – The UBC Supermileage Team pushes for innovative vehicle designs and construction techniques that have made the team highly competitive. This year the team plans to tackle two competitions by sleeving our engine on the prototype vehicle, providing our team with new potential for increasing efficiency. In addition, a two-year design project to create a second iteration of monocoque body, as well a design project for creating our own custom hydraulic brakes for the urban concept will be commencing this year.

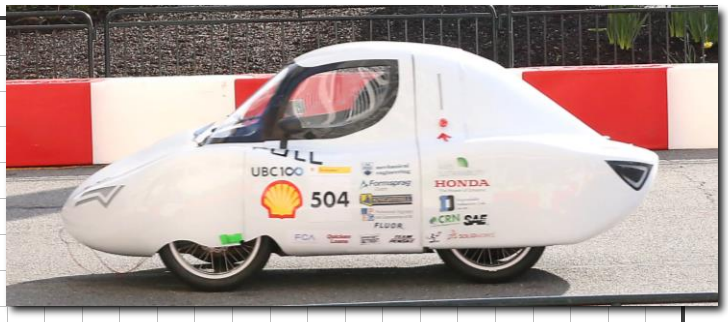
EDUCATION

CREATE MORE WELL ROUNDED ENGINEERS – The UBC Supermileage Team provides an inclusive environment for learning outside of the classroom. Senior member in various areas of vehicle design and development mentors junior members. The team's growing internal training sessions include CAD modeling tutorials, carbon fiber layup demonstration, and wind tunnel tests. Team members are not only exposed to learning in the technical areas, but also in teamwork, project management and professional development.

RAISING AWARNESS

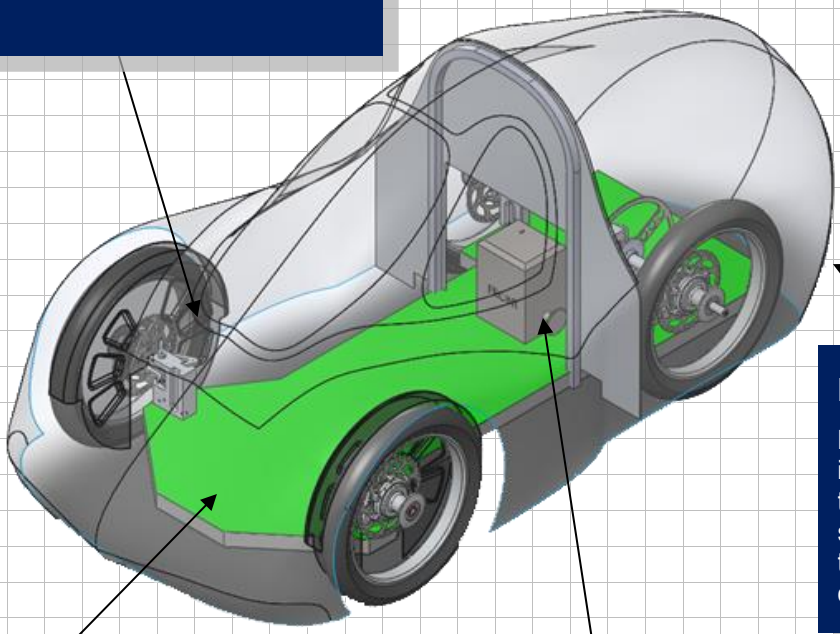
The UBC Supermileage Team is passionate about creating sustainable transportation and wants to contribute by raising awareness about energy conservation. In addition to presenting at various conferences, the team actively participates in various teaching opportunities for high school and elementary school students through tours and science camps. The team intends to organize numerous community events throughout the year to promote project and environmental issues.

URBAN CONCEPT: ZEPHYR



STEERING

All components in the steering system are custom designed and fabricated to be as lightweight as possible. On the rare occasions when the brakes are applied, we use hydraulic brake calipers from mountain bikes with custom made rotors to fit our custom wheels.



BODY

Made of carbon fiber, the body is designed with CAD, and tested extensively using CFD software and scale models in the wind tunnel for aerodynamic optimization.

CHASSIS

The custom chassis is constructed from Nomex honeycomb. This non-metallic composite material is used extensively in aircraft construction. It is extremely lightweight and has a high strength to weight ratio, making the chassis both light and stiff.

ENGINE

The car uses a 50cc Honda GXH50 motor that, if left stock, has 2.1 hp. The stock carburetor has been replaced with a custom electronic fuel injection system to allow for engine tuning and increased fuel efficiency.

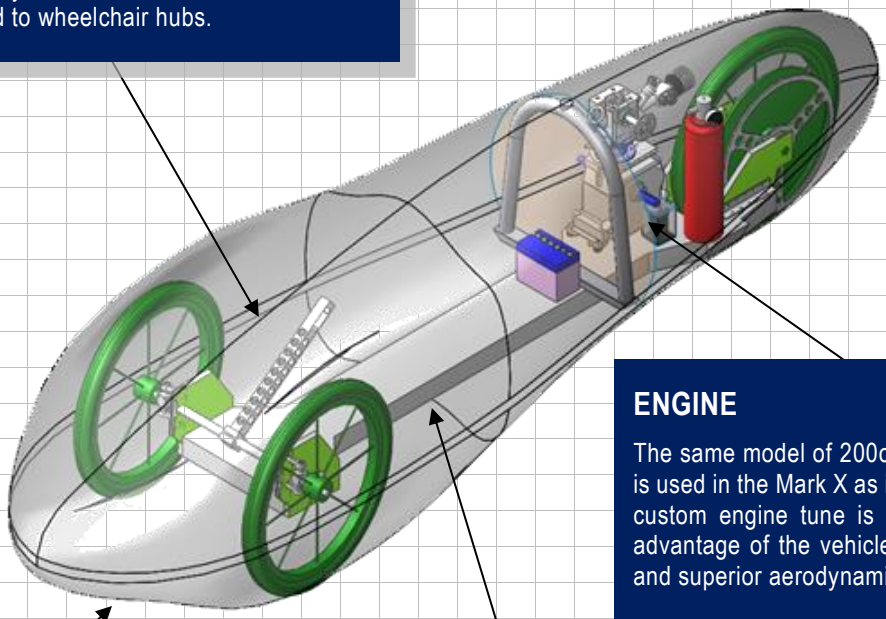
File Name	Sponsorship Package	Date	Sept. 30, 2016

Prototype: Mark XI

STEERING

Water jet aluminum and plastic components keep the steering system extremely lightweight and precise. Simple mechanical disc brakes normally installed on bicycles are used with steel rotors on wheels spoked to wheelchair hubs.



ENGINE

The same model of 200cc Briggs engine is used in the Mark X as in the Zoticus. A custom engine tune is created to take advantage of the vehicle's lower weight and superior aerodynamics.

CHASSIS

The minimalist chassis will be constructed from Nomex honeycomb, the same material used on Zoticus. It is extremely lightweight with a high strength to weight ratio, which allows the chassis footprint to be very small.

BODY

Carbon fiber is used for the construction of the Mark IX shell. This ultra-light material allows us to form the intricate curves that give our vehicle its distinctive shape.

Why Get Involved?

We are hoping to develop relationships with industry organizations interested in offering their support. Partnering with us provides several benefits.

Career Recruitment

The UBC Supermileage team consists of engineering students who demonstrate a passion for engineering design by taking initiative outside the classroom. Sponsorsing and meeting the team is a good opportunity to recruit engineering students who have already demonstrated commitment, professionalism and willingness to learn.

Media Coverage

Every year UBC Supermileage partakes in media events that allow the team to be featured on newspapers and broadcasts. Last year, the team was covered in segment on Global News, in addition to being featured in local newspapers. Below are some highlights of the team's past media coverage. This year will be working with Sustainability Television and helping them film season 2.

TIME

"…you don't really need funky alternative fuels or an electric motor to trim your energy consumption on the road. Sometimes all it takes is a little ingenuity." **– Time Magazine's Greatest Invention of 2006**

Discovery Channel Daily Planet

"What do you get when you challenge a bunch of engineering student to build a green car. At the University of British Columbia you get … [a] three wheeler that can travel 3145 miles on a single gallon of gas." **– Daily Planet**

THE VANCOUVER SUN

"…a group of University of B.C. engineering students has designed a vehicle that will run from Vancouver to Halifax on $5 worth of gas and fumes." **– The Vancouver Sun**

SPONSORSHIP LEVELS

UBC Supermileage Team enjoys partnerships with many companies every year. With the support of sponsors such as you, we are confident that we can achieve our goals this year and remain a highly competitive and impactful team.

Both monetary and non-monetary sponsorships, including technical support, are recognized annually and are greatly appreciated by the team. Each sponsor, regardless of status, will receive monthly email updates from the team and will have the opportunity to meet with team members and tour the team's workshop. Sponsorship status is detailed below but we are happy to discuss other partnership arrangements. For more information please contact us at sponsor@supermileage.ca

GOLD ($5000 OR MORE)

Gold sponsors will have a large logo displayed in a dominant position on both competition vehicles. Also, the logo of your business will be featured on the team's web page and promotional materials.

SILVER ($1000-$4999)

Silver sponsors will have a medium-sized logo displayed with preferential placement on both competition vehicles. Also, the logo of your business will be featured on the team's web page and promotional materials

BRONZE (LESS THAN $1000)

Bronze sponsors will have logo displayed on one competition vehicle, or both if space allows, team's web page and promotional materials

IN-KIND (NON-MONETARY SUPPORT/DONATION)

In-kind sponsors will be given a gold, silver, or bronze status based on contribution. The team values non-monetary support such as technical expertise, facility rentals, material donations and equipment donations. Other sponsorship arrangements can be discussed. Details of sponsorships will be discussed on an individual basis.
